

EES Meta Trader Risk Management Module

For Traders and Money Managers

- 1) Manager loads EA and enters his email.
- 2) Manager enters constraints
- 3) Trading is enabled
- 4) Traders need to load the EA onto any chart to display info. Trade info is displayed.
- 5) File is created with daily trade results. File is emailed to manager daily.

Settings:

Each setting should be able to be turned ON or OFF.

Email: notification email address

Account Protection%: 5 - if equity falls to 5% of balance (open p/l is down 5% from original), then close all trades pending manual restart, and email notification address a text message.

Trade Protection IN PIPS (regardless of lot size): Global Stop loss – not willing to lose more than 20 pips per trade on ANY trade regardless of lot size (1 pip is 1 pip on 1 lot, 10 lots, or .1 lot)

Trailing Profit Global Stop%:1 If account is positive in profit, amount of retracement allowed before trades are kicked out. I.e. if a trade has 10,000 in profit (on a 10,000 account) and the 10,000 profit erodes to 9,000 – trade is kicked (if setting is 10%)

Daily Loss Limit%:%: 5 - if equity falls to 5% of balance (open p/l is down 5% from original), then close all trades pending manual restart, and email notification address a text message (which I will prepare). ALLOWED TO LOSE IN ANY GIVEN TRADING DAY – FROM ROLLOVER TO ROLLOVER (24 HOUR PERIOD)

Weekly Loss Limit%:%: 5 - if equity falls to 5% of balance (open p/l is down 5% from original), then close all trades pending manual restart, and email notification address a text message (which I will prepare). ALLOWED TO LOSE IN ANY GIVEN TRADING WEEK

Monthly Loss Limit: %: 5 - if equity falls to 5% of balance (open p/l is down 5% from original), then close all trades pending manual restart, and email notification address a text message (which I will prepare). ALLOWED TO LOSE IN ANY GIVEN TRADING MONTH

Password feature:

If any limits are hit, manual trading AND ea trading should be disabled, pending entering a password into a settings field. Traders who do not have the source code will not know what the password is.

Is this do-able?

Display on screen:

- How close to hitting daily, and weekly, and monthly loss limits
- Total Daily, weekly, monthly p/l
- Trade p/l
- Distance to be kicked out on Trailing Global Stop%

Should be executed on any pair but be global.

The developed EA is using third party dll (non commercial) to send e-mail with attachment.

I have implemented that when the EA must close all positions, it is closed, and then shutdown the terminal to avoid any trading.

Now some parameters:

Email= "user@server.com" - e-mail to send report and notifications; SMTP_Server = "smtp.server.com" - smtp server; SMTP_Login = "login" - smtp login; SMTP_Password = "password" - smtp password;

Also please allow dll executing from the terminal and the properties of the EA. The attached dll - blat.dll please copy to the experts\libraries

The report is making once a day at 23:55 and saves under reports folder in the html format.
